PROCESS WORK

We are noted for our major process work. Depending on the requirements of the project and the industry, we use stainless steel, glass, fiberglass, copper, PVC, Teflon lined piping systems, or whatever piping material is most appropriate for the project at hand.

FABRICATION

Piping fabrication is a key component of Armistead's project management philosophy, and our project teams employ prefabrication whenever possible on all jobs. It not only offers savings to our customers, but also provides a competitive edge and scheduling advantages.

DESIGN ASSIST

We provide 3D design assist coordination with a collaborative approach that results in higher quality, functionality, and cost savings. Our design teams include P.E.'s, Licensed Master Plumbers and HVACR specialists skilled at applying virtual design, prefabrication and value engineering methods to meet the mechanical needs of any project.
